

Efficient hospital management that makes a difference

Optimize processes and enhance management
in hospitals, clinics, mutual insurance
companies and medical centers.

Axional Health Suite offers a comprehensive software solution for hospitals and clinics, incorporating all the functionalities required for efficient inpatient management.

Key challenges

Hospitals require efficient management of their resources to provide quality patient care while optimizing costs. To achieve this, it is essential to have comprehensive control of patient administration, as well as access to up-to-date information on processes and available resources.

Our hospital management software adapts to a wide variety of situations offering flexible solutions for every patient need.

Benefits of Health Suite

Axional Health Suite is a complete and scalable solution designed for the operational management of hospitals, clinics, medical centers and mutual health insurance companies. With a modular architecture and specific adaptation for the healthcare sector, it offers full coverage of the most demanding needs, providing flexibility and efficiency to organizations of any size, regardless of their complexity.

Cost savings

The system optimizes costs by alerting on process non-compliance, enabling comparisons between spend and budget, and reducing data entry errors. It also streamlines administrative tasks such as inventory management and time allocation, improving overall efficiency.

Increased productivity

The system improves productivity by providing greater control over patient management, optimizing equipment and facility maintenance, and simplifying administrative tasks, allowing more time to be focused on care activities. It also guarantees compliance with protocols and procedures, ensuring quality of service and compliance with standards.

Characteristics

It integrates as standard with multiple key systems, optimizing information management and improving operational efficiency.

- » Integration with the health care system to receive data on the implants performed, allowing a complete follow-up.
- » Integration with the invoicing module, ensuring the correct accounting of invoices and collections in an automated way.
- » Integration with pharmacy to notify product receipts and record consumption accurately.
- » Integration with the Human Resources system, allowing the allocation of personnel costs to the corresponding cost centers and analytical accounting.
